

## **CNSCC 203 Demo Video Recording Frequently Asked Questions**

### **Q.1 Do I need to explain my code? But I worry it may take a long time to explain everything.**

Yes, you need to explain your code in the recorded video. But you don't need to explain them line-by-line. It is encouraged to explain the idea, the logic and key functions of your code. If there are some key features or additional features that are implemented, you are encouraged to introduce them in the video.

### **Q.2 Can we edit the recorded video?**

For different tasks, you can record the demos separately. Then, you can either combine them into one video or upload all the short videos to Moodle. However, for the recorded video for **one** task, please do not edit the recorded demo process, because we would like to see clearly what outputs are generated by your program.

### **Q.3 Can I use other websites instead of [lancaster.ac.uk](http://lancaster.ac.uk) to test my proxy server?**

Yes, you can use any websites as you wish.

### **Q.4 My proxy server receives 301 Moved Permanently response code. What should I do?**

This is due to the web server believes that the request should be redirected to https URL. You can try other websites to avoid this. Use the following tool which shows if a http URL will be redirected to https URL: <https://hstspreload.org/>

### **Q.5 Should I show my face in the recorded demo video?**

Yes, you are strongly encouraged to show your face in the recorded demo video.

### **Q.6 Can I record a demo video without my face captured and then upload a separate video showing my face?**

Sorry the problem is that, in that case, we cannot tell if you did the demo by yourself. We strongly encourage you to record the demo showing your face.

### **Q.7 The recorded video is longer than 10 minutes. Is that alright?**

We expect to finish the video demo and the Q&A in 10 minutes for each student. If the recorded video alone is longer than 10 minutes, then we won't have time to have Q&A. In that case, we would suggest you use 1.25 or 1.5 speed when you play your video demo during the assessment or you can directly make the video faster after you record it. This could save us some time to do Q&A.

Video Player that has the speed up options:

Windows: [Windows Media Player](#), [PotPlayer](#)

Mac: [QuickTime](#)

### **Q.8 I made a video only showing the demo process without explanations. That takes me more than 6 minutes already. Do I still need to explain my code?**

Both parts are required in the video. The demo process shows the functionality of your program. But you can speed up it when you play the video during the assessment or you can directly make a faster video if you would like to. We just need to see what functions are achieved, but there is no need to wait for a long silent period to watch the outputs slowly generating. I know that we've mentioned

'please do not edit the demo process'. It's because we want to avoid anybody manipulating or faking the results they get. But speeding it up and make it faster are OK.

On the other hand, your explanations to your code can reflect your idea and logic of achieving the tasks. That's why we would like to see that part as well. How you've done it means a lot. For this part, you can also speed up the video as long as your voice and explanations can be heard clearly.

*Note: More questions may be added and the FAQ document may be updated if there are any other questions that are relevant to many students.*
